About Me

I am a T-shaped UX/UI Designer with end-to-end experience, bridging UX research, information architecture, user flows, wireframing, high-fidelity prototyping, and UI design with front-end implementation. My focus is on transforming real user problems into intuitive, accessible, and consistent digital experiences that align with product goals.

I hold a degree in Systems Analysis and Development (ADS) from UNIP and have completed the Google UX Design Professional Certificate, solidifying my skills in research, problem definition, ideation, prototyping, usability testing, and iteration.
My technical background in React, React Native, and TypeScript facilitates collaboration with developers and minimizes friction during the design-to-code handoff.
I have experience with Design Systems, focusing on component structure, visual hierarchy, and interface consistency—from Figma through to implementation. I integrate generative AI into the design process to accelerate research, ideation, and prototyping while maintaining high standards for quality, accessibility, and real-user validation.

Toolbox: Figma, UX Research, Usability Testing, Design Systems, React, React Native, TypeScript, HTML, and CSS.
I aim to work with product teams where I can contribute both strategically and hands-on, helping to solve complex problems and drive the continuous evolution of digital experiences.

Professional Experience

Jun 16, 2025 – Nov 26, 2025 (completed)

TI Help — Technical Support System (Capstone Project)

Worked as a UX/UI Designer and mobile front-end developer in a multidisciplinary team of 4, leading the end-to-end design (research, flows, and high-fidelity prototype) of an integrated ticket management system (technical support) for Mobile, Web, and Desktop.

Implemented the mobile version of the application in React Native, supported by generative AI tools to accelerate the development cycle, while the rest of the team built the back-end, API, and database, with academic guidance from Software Architecture and Database professors, among others, throughout the project.

Conducted interviews and usability tests with 11 participants (7 classmates from my Systems Analysis program, 2 from another cohort, and 2 Psychology students) and with the advising professors, recording an 85% task completion rate without any prior guidance — validating interface clarity. The resulting insights reshaped the product backlog and optimized the user navigation flow; the project was graded 8.5/10 by the capstone review board.

Project – TI Help

Since Nov 2025 – (Ongoing)

Social Media — Freelance for City Councilman

Planned and executed the visual communication and content strategy (posts, reels, and visual identity) for political communication, translating public engagement goals into design guidelines and an editorial calendar.

Generated 10K views on a single post and reached 47.7K views in the most recent quarter (Mar–Jun/26) — roughly 29% growth over the previous quarter's 37K, according to Instagram Insights — gaining over 170 new followers with 96.5% organic reach (only 3.5% via paid ads).

@vereador.elvis

Since Dec 2022 (Ongoing)

Volunteer — Foursquare Gospel Church

Led content direction, visual identity, and video editing (YouTube thumbnails and social media) for institutional communication, working consistently for over two years.

Drove organic channel growth to 250 YouTube subscribers, over 400 Instagram followers, and around 3K monthly views, 100% through organic content strategy.

@quadrangular.urupes (on all platforms)

Projects & Case Studies

KaloBurn | UX/UI Design · Product Design · Mobile First

Led the end-to-end design of a fitness app with smartwatch/Mi Band integration and manual physical data logging, designing AI-generated adaptive workouts in real time based on the user's profile and goals.
Designed the "Health Score" gamification system, featuring rankings and social challenges, applying motivation and retention principles to drive recurring engagement.
Structured the marketplace model connecting users with nutritionists and personal trainers, including data-driven dashboards for professionals to optimize their earnings.

Conducted a full usability audit (Nielsen's 10 heuristics) across 14 prototype screens in Figma, mapping UI inconsistencies and flow gaps before the development handoff.

DN Jeans | Strategic UX · Landing Page (Product Catalog)

Conducted user research that revealed a preference for direct communication, and used this insight to redesign the purchase journey, replacing a traditional e-commerce store with a digital catalog that converts via WhatsApp.
Structured a lean navigation architecture with visual categories instead of complex filters, guiding the user through the explore → choose → buy funnel.
Defined conversion-oriented microcopy and CTAs, aligning user expectation and action to reduce drop-off and speed up the purchase decision.

ImovePro | UX/UI Design · Web/Mobile

Redesigned the mental model for property search, replacing traditional city-based filters with radius-based geolocation search, using an interactive map as the core of navigation.
Designed segmented flows and dashboards for three distinct personas (individuals, agents, and companies), balancing ease of use with functional depth for each profile.
Simplified the filter architecture and increased listing transparency, reducing friction in direct contact between parties.

Technical Skills

UX Skills

- UX Research, User Flows, Wireframing, Prototyping, Design Systems, Usability Heuristics, WCAG and ARIA Accessibility.

Development

- HTML, CSS, React with TypeScript, and React Native.

- Agile methodologies (Scrum, Kanban, TDD).

Tools

- Notion, Figma, Canva, Adobe Lightroom, CapCut, Webflow, and Photoshop. - I use AI tools for productivity and ideation, including Google Flow, ChatGPT, and Claude.

Education

Associate Degree in Systems Analysis and Development

UNIP, Brazil. Completed in December 2025.

Currently pursuing the IBM UX/UI Design Certificate.

Languages

Portuguese: Native

English: Intermediate level (self-taught)
