Experiencie

Jun 16, 2025 – Nov 26, 2025

TI Help — Sistema De Suporte Técnico (TCC)

Designed and developed a full ticket management system as my Associate Degree thesis, covering the entire UX process from research to prototype. I created clear user flows, intuitive interfaces and optimized communication between technicians and customers.

Usability testing showed an 82% improvement in perceived user experience compared to the previous workflow.

[Project - Support TI](#)

Since Nov 1, 2025 - Present

Social Media - Freelance for Councilor

Designed posts, reels and visual identity for political communication, focusing on clarity and public engagement.

The work achieved 10K views on a single post and 35K total organic views in 90 days, generating 140 new followers with 100% organic reach.

Core Skills

UX Skills

-UX Research, User Flows, Wireframing, Prototyping, Design Systems, Usability Heuristics, WCAG and ARIA Accessibility.

Development

-HTML, CSS, React with TypeScript and React Native.

- Agile methodologies (Scrum, Kanban, TDD).

Tools

My workflow includes Notion, Figma, Canva, Adobe Lightroom, CapCut, WebFlow and Photoshop.

-I use AI tools to support productivity and ideation, including Google Flow, ChatGPT and Claude.

Education

Associate Degree in Systems Analysis and Development
from UNIP, Brazil. Graduated in December 2025

Coursing IBM's Course UX/UI design.

About Me

UX Designer combining systematic thinking with a strong understanding of front-end constraints. I specialize in building scalable Design Systems using Brad Frost's Atomic Design methodology, seamlessly bridging the gap between Figma structure (components, variables, advanced auto-layout) and developer handoff. Driven by AI-assisted workflows, I leverage generative and productivity tools to accelerate user research, ideation, and rapid prototyping. I design intuitive, interactive digital products that are inherently built for accessibility (WCAG/ARIA) and modern business scale.
